EXECUTIVE SUMMARY

Bettercows, sebuah Startup Agri-tech, merespon situasi mendesak dalam mengatasi tantangan kelaparan global dengan menyajikan solusi inovatif di industri peternakan sapi. Dalam konteks tahun 2050, proyeksi kenaikan permintaan protein hewani sebesar 52% memicu kebutuhan mendesak, sementara pada tahun 2030, sekitar 660 juta orang masih menghadapi ketidakpastian pangan. Di Indonesia, prevalensi stunting mencapai 21,6%, dan konsumsi protein harian hanya 62,21 gram, jauh di bawah standar negara tetangga dan maju.

Bettercows menawarkan solusi berkelanjutan dengan fokus pada membangun ekosistem pertanian yang inklusif menggunakan teknologi IoT. Melalui produk pakan inovatif yang mengandung rumput laut dan 3-NOP, Bettercows tidak hanya memberikan nilai ekonomis tetapi juga mengurangi emisi metana dari ternak sapi, mendukung upaya global untuk mengatasi perubahan iklim.

Unique Selling Proposition Bettercows mencakup campuran pakan hibrida, akses ke modal, dan pembiayaan, serta fitur titip ternak untuk memperluas partisipasi peternak. Solusi end-to-end melalui platform Bettercows memastikan efisiensi dalam manajemen dan penjualan ternak. Dengan mesin pemberi makan otomatis dan pemantauan real-time, Bettercows meningkatkan kesejahteraan ternak dan efisiensi peternakan secara keseluruhan.

Target market Bettercows adalah pemilik peternakan sapi di Kabupaten Sumenep, Jawa Timur, dengan usia 35 tahun dan penghasilan 150 juta Rupiah per tahun. Dengan pangsa pasar yang potensial, total populasi sapi di Sumenep mencapai 388,090.

Secara finansial, Bettercows merencanakan investasi awal sebesar 1,1 milyar Rupiah untuk pengembangan aplikasi, legalitas, dan produksi pakan. Proyeksi pendapatan mencakup penjualan pakan dan mesin automatic feeder, dengan pendapatan kotor pada tahun pertama sebesar 1,49 milyar Rupiah, dan pendapatan bersih pada tahun ketiga mencapai 896,459,673 Rupiah. Tingkat pengembalian investasi (ROI) mencapai 81,50%, menunjukkan keberhasilan Bettercows dalam memberikan dampak positif di sektor pertanian dan ekonomi.

BUSINESS OVERVIEW

1.1 Background and Problem

Pada **tahun 2050**, proyeksi kenaikan permintaan global akan protein hewani sebesar **52%** menciptakan sebuah situasi mendesak dalam mengatasi tantangan kelaparan global. Namun, pada tahun 2030, diperkirakan sekitar **660 juta orang** masih harus menghadapi ketidakpastian pangan. Di Indonesia, **tingkat prevalensi stunting mencapai 21,6%**, sementara **konsumsi protein harian hanya mencapai 62,21 gram**, jauh di bawah standar negara tetangga dan negara maju.

Komplikasinya, Indonesia terpaksa mengimpor **279,97 ribu ton daging beku** setiap tahunnya karena produksi daging dalam negeri terus menurun. Peningkatan produksi ternak berpotensi memicu peningkatan emisi gas metana, dengan **5,1 miliar sapi di dunia**, setara dengan 1 sapi untuk 5 orang, dan **4% dari emisi global berasal dari gas metana** yang dihasilkan dari pencernaan sapi.

Dalam menghadapi kompleksitas ini, pertanyaan besar muncul: **Bagaimana cara meningkatkan skalabilitas produksi peternakan sambil secara efektif mengurangi emisi metana yang dihasilkan dari proses pencernaan pada sapi?**
Analisis masalah ini menuntut solusi inovatif yang dapat meningkatkan produksi protein hewani secara berkelanjutan tanpa mengorbankan ketahanan pangan dan tanpa meningkatkan emisi gas metana yang merugikan lingkungan.

1.2 Solution & Problem Solved

Bettercows, sebagai Startup Agri-tech, menyajikan solusi inovatif untuk mengatasi tantangan yang dihadapi oleh industri peternakan sapi. Dengan fokus pada **membangun ekosistem pertanian yang berkelanjutan**, kami memanfaatkan teknologi IoT untuk mendukung para peternak. Produk pakan inovatif kami, yang mengandung rumput laut dan 3-NOP, dirancang khusus untuk mengurangi gas metana yang dihasilkan dari proses pencernaan sapi.

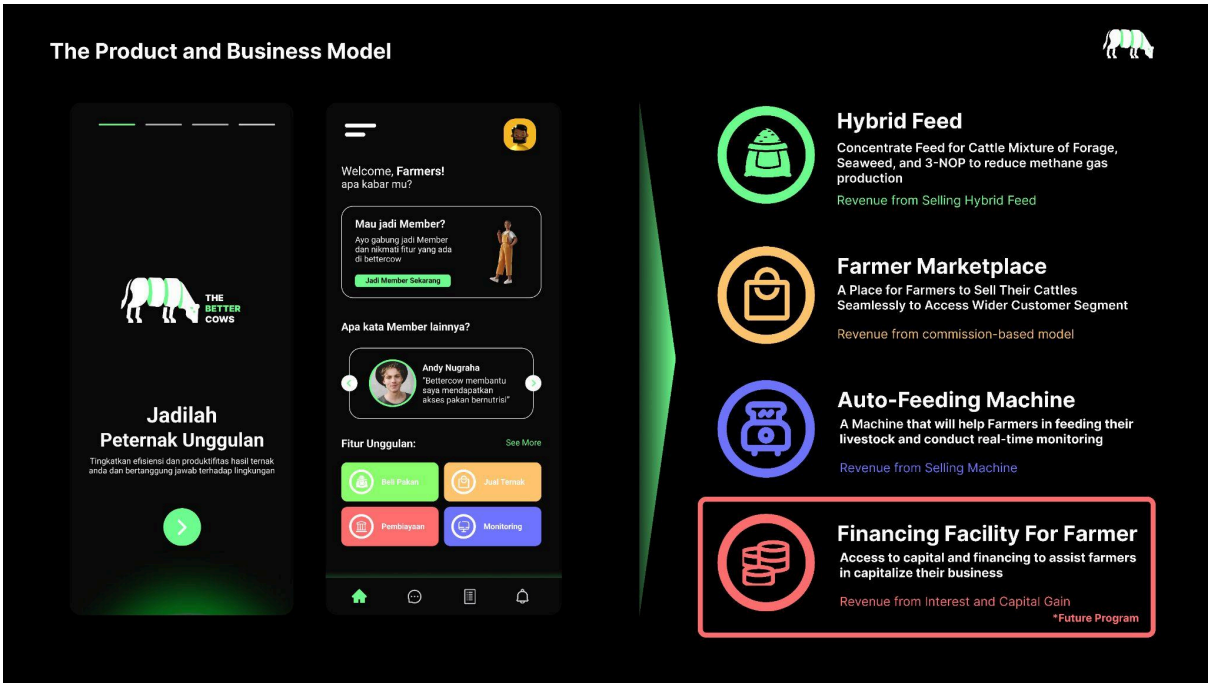

Melalui pengintegrasian pengumpan otomatis dengan teknologi IoT dan aplikasi, kami memberikan solusi holistik yang tidak hanya meningkatkan efisiensi dalam pengelolaan peternakan, tetapi juga secara signifikan mengurangi dampak lingkungan melalui pengendalian emisi metana.

Dengan menyediakan akses kepada para petani ke dalam ekonomi digital yang inklusif, **Bettercows berperan sebagai jembatan yang mengatasi kesenjangan teknologi di sektor pertanian**. Solusi kami tidak hanya memberikan kemudahan dalam mengelola peternakan, tetapi juga secara efektif mengurangi beban emisi metana yang menjadi kontributor utama perubahan iklim.

Dengan demikian, Bettercows berkomitmen untuk tidak hanya memberikan solusi praktis bagi peternak di masa depan, tetapi juga berperan dalam mendukung keberlanjutan lingkungan dan menciptakan ekonomi pertanian yang lebih efisien dan inklusif.

1.3 Company Profile

Nama Produk : Bettercows
Jenis : Platform Bisnis
Model Bisnis : B2B (Business to Business Business)

1.4 Unique Selling Proposition

Campuran Pakan Hibrida Konsentrat, Gabungan Rumput Laut, dan 3-NOP:
Bettercows menawarkan solusi unik dengan campuran pakan hibrida yang terdiri dari konsentrat, rumput laut, dan 3-NOP. Ini bukan hanya sekadar pakan, tetapi juga merupakan langkah nyata untuk mengurangi produksi gas metana dari ternak sapi. Dengan fokus pada keberlanjutan lingkungan, Bettercows memberikan nilai tambah dengan kontribusi positif terhadap upaya global dalam mengurangi dampak negatif industri peternakan terhadap perubahan iklim.

Akses ke Modal dan Pembiayaan, Fitur Titip Ternak:
Bettercows memberikan lebih dari sekadar teknologi, tetapi juga membuka pintu akses ke modal dan pembiayaan untuk membantu petani dalam memodali bisnis mereka. Fitur titip

ternak menjadi solusi inovatif yang memungkinkan partisipasi peternak awam dengan risiko lebih rendah, melalui kerjasama dengan peternak terverifikasi. Inilah langkah konkret Bettercows dalam menciptakan inklusivitas ekonomi di sektor peternakan.

Solusi End-to-End dalam Satu Platform:
Bettercows menyajikan solusi end-to-end melalui platformnya, memudahkan para peternak dalam seluruh proses penjualan ternak. Dari manajemen ternak hingga transaksi penjualan, platform ini memberikan efisiensi dan kemudahan, memastikan pengalaman yang komprehensif bagi para peternak yang menggunakan layanan Bettercows.

Mesin Pemberi Makan Otomatis dengan Pemantauan Real-time:
Dengan Mesin Pemberi Makan Otomatis, Bettercows memberikan nilai tambah signifikan dalam hal efisiensi dan pemantauan peternakan secara real-time. Peternak dapat dengan mudah memberi makan ternak mereka tanpa khawatir, sambil memantau kondisi ternak secara langsung. Inovasi ini memberikan solusi praktis dan teknologis bagi para peternak, memperkuat keseluruhan manfaat Bettercows sebagai mitra yang andal dalam pengelolaan peternakan.

1.5 Social Impact and Product Benefits

Dampak Sosial:

Penggunaan pakan inovatif Bettercows yang mengandung rumput laut dan 3-NOP bukan hanya sebuah terobosan dalam mengurangi emisi metana dari pencernaan ternak, melainkan juga memiliki dampak sosial yang signifikan. Bettercows secara efektif berkontribusi pada upaya global untuk mengurangi dampak negatif perusahaan peternakan terhadap perubahan iklim. Dengan demikian, Bettercows berperan sebagai solusi yang tidak hanya memberikan manfaat lokal bagi para peternak, tetapi juga memainkan peran krusial dalam **mendukung keberlanjutan lingkungan di tingkat global**.

Manfaat Produk:

Di sisi lain, integrasi pengumpan otomatis dalam aplikasi Bettercows memberikan manfaat langsung dalam efisiensi pengelolaan peternakan. Peternak dapat dengan mudah mengatur dan memantau pola pakan ternak secara real-time melalui platform digital kami. Penggunaan teknologi ini **memberikan keuntungan ekonomi** yang nyata, memungkinkan waktu dan **sumber daya dikelola dengan lebih efisien**. Sehingga, manfaat produk Bettercows tidak hanya terbatas pada peningkatan produktivitas peternakan, tetapi juga menciptakan lingkungan yang lebih efisien dan berkelanjutan di tingkat lokal.

1.6 SWOT Analysis

Strengths (Kelebihan): **1. Pakan Inovatif dan Berkelanjutan:** Campuran pakan hibrida Bettercows, termasuk rumput laut dan 3-NOP, menjadi kekuatan utama dalam mengurangi produksi gas metana dari ternak sapi, mendukung upaya global untuk keberlanjutan lingkungan. **2. Akses ke Modal dan Pembiayaan:** Kemampuan Bettercows untuk memberikan akses ke modal dan pembiayaan kepada petani mengukuhkan posisinya sebagai platform yang tidak hanya teknologis, tetapi juga ekonomis dan inklusif. **3. Solusi End-to-End:** Platform Bettercows yang menyajikan solusi end-to-end memberikan keunggulan kompetitif dengan memudahkan para peternak dalam seluruh proses manajemen dan penjualan ternak. **4. Fitur Titip Ternak:** Konsep titip ternak merupakan kekuatan tambahan, mengurangi risiko bagi peternak awam dan meningkatkan partisipasi di sektor peternakan. **5. Teknologi IoT untuk Pengumpan Otomatis:** Mesin pemberi makan otomatis dengan pemantauan real-time memberikan efisiensi tinggi dalam pengelolaan peternakan, meningkatkan produktivitas dan kesejahteraan ternak.	Weaknesses (Kelemahan): **1. Ketergantungan pada Teknologi:** Dalam konteks pertanian yang mungkin masih mengandalkan infrastruktur dan literasi digital yang terbatas, ketergantungan pada teknologi mungkin menjadi hambatan bagi adopsi di beberapa wilayah. **2. Kesulitan dalam Edukasi dan Pendidikan Petani:** Perubahan model bisnis dan penerapan teknologi baru dapat menghadapi kesulitan dalam mendidik dan melibatkan petani yang mungkin kurang akrab dengan teknologi. **3. Harga Pakan Inovatif:** Ketersediaan dan harga bahan baku untuk pakan inovatif seperti rumput laut dapat menjadi kendala, mempengaruhi keberlanjutan model bisnis Bettercows. **4. Penerimaan Pasar yang Mungkin Tidak Sejalan:** Masyarakat dan pasar mungkin membutuhkan waktu untuk menerima konsep pakan inovatif dan solusi teknologi dalam pengelolaan peternakan.

Opportunities (Peluang): **1. Pertumbuhan Permintaan Global untuk Produk Pertanian Berkelanjutan:** Dengan tren meningkatnya permintaan produk pertanian berkelanjutan, Bettercows memiliki peluang besar untuk memenuhi kebutuhan pasar yang berkembang. **2. Kemitraan dengan Pemerintah dan Lembaga Keuangan:** Peluang kerjasama dengan pemerintah dan lembaga keuangan dapat memperkuat akses modal dan pembiayaan untuk petani. **3. Ekspansi Internasional:** Mengidentifikasi pasar internasional untuk ekspansi dapat menjadi langkah strategis untuk memperluas dampak Bettercows di tingkat global. **4. Inovasi Produk dan Pengembangan Layanan:** Terus mengembangkan inovasi pada produk dan layanan dapat menjadikan Bettercows sebagai pemimpin pasar dalam industri Agri-tech. **5. Edukasi dan Kampanye Peningkatan Kesadaran:** Kesempatan untuk memberdayakan petani dengan pendekatan edukasi dan kampanye peningkatan kesadaran akan keberlanjutan dan manfaat teknologi bagi peternakan.	Threats (Ancaman): **1. Perubahan Kondisi Ekonomi:** Fluktuasi ekonomi dapat mempengaruhi daya beli petani dan pasar pertanian secara keseluruhan, mengancam keberlanjutan bisnis Bettercows. **2. Persaingan di Pasar Agri-tech:** Kemunculan pesaing baru atau inovasi dari pesaing yang sudah ada dapat mengintensifkan persaingan di pasar Agri-tech. **3. Perubahan Kebijakan Pemerintah:** Perubahan regulasi dan kebijakan pemerintah di sektor pertanian dapat memiliki dampak besar terhadap operasional Bettercows. **4. Tingginya Biaya R&D:** Peningkatan biaya riset dan pengembangan untuk mempertahankan inovasi dapat menjadi hambatan finansial. **5. Ketidakpastian Iklim dan Musim:** Perubahan iklim dan fluktuasi musim dapat mempengaruhi produksi pakan dan kesehatan ternak, menjadi ancaman bagi bisnis Bettercows.

OPERATIONAL PLAN

2.1 Business Implementation

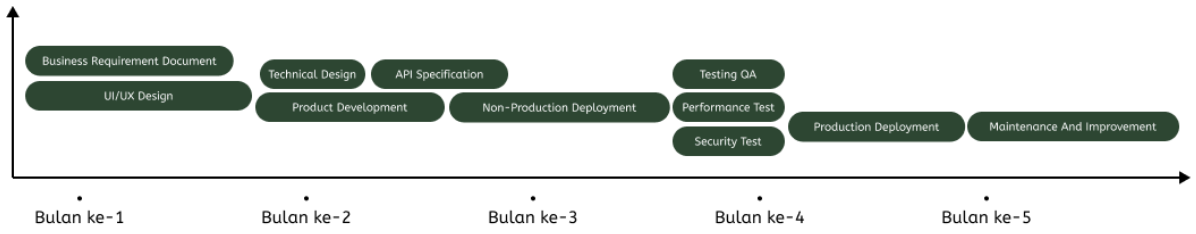

In describing the Bettercows business implementation scheme, we adapted the Business process Model and Notation (BPMN) in appendix 2 which involves collaboration between the Sales & CX, Production, Procurement, Distribution and Logistics teams.

2.2 Product and Features

Explanation of Products and Features available at Bettercows as follows:

1. **Seaweed and 3-NOP Hybrid Feed**
   Concentrated feed for livestock from a mixture of forage, seaweed, and 3-NOP, aims to reduce the production of methane gas derived from the digestive process of livestock. This innovation not only increases the nutritional value of feed but also has a positive impact on the environment, making it a sustainable solution to support livestock productivity.
2. **Farmer's Market**
   A place for farmers to seamlessly sell their livestock, allowing them to access a wider segment of customers. With this platform, farmers can expand their marketing reach and increase sales potential, creating an inclusive and efficient trading ecosystem.
3. **Automatic Feeding Machine**
   An innovative machine that not only assists farmers in feeding their livestock automatically, but also provides real-time monitoring. With this technology, farmers can optimize feeding patterns, save time, and improve their farm management efficiency.
4. **Financing Facilities for Farmers**
   Provide access to capital and financing needed by farmers to develop and manage their business. With adequate financial support, farmers can more easily implement innovations, increase production, and contribute to local economic growth.

2.3 Product Roadmap

2.4 Full Life Cycle Use Case

Persona: Irfan, a small-scale dairy farmer in Indonesia

Scenario: Irfan struggles with managing his herd of 20 cows. He spends significant time manually feeding his cows, worries about rising feed costs, and is concerned about the environmental impact of his farm. Irfan has limited experience with technology but is open to learning if it can benefit his farm.

Stage	Description	Benefits for Irfan (Farmer)	Benefits for Bettercows
Awareness & Consideration	Irfan learns about Bettercows at a local fair.	- Discovers potential for efficiency & sustainability.	- Increased brand awareness.
Evaluation & Onboarding	Irfan receives a farm consultation and understands the solution.	- Gains clear understanding of Bettercows' offerings.	- Qualified lead conversion.
Implementation & Training	Bettercows installs feeders, integrates the app, and trains Irfan.	- Farm gets equipped with automated feeding system.	- Recurring revenue stream.
Activation & Usage	Irfan starts using the feeders and app to manage his farm.	- Saves time on manual feeding, monitors herd remotely.	- Customer activation and data collection.
Ongoing Support & Optimization	Irfan receives support and further optimizes feeding based on data.	- Improved herd health, efficient feed usage.	- Customer retention and data-driven product development.
Renewal & Advocacy	Irfan renews his subscription and becomes a Bettercows advocate.	- Reduced feed costs, positive environmental impact.	- Customer loyalty and positive brand reputation.

2.5 Quality Control

1. **Feed Formula Standardization**
   Ensure that innovative feed formulas containing seaweed and 3-NOP are regularly tested, validated and adjusted. Standardization of the formula ensures consistency in the quality of the feed produced.
2. **Production Process Monitoring**
   Implement a real-time monitoring system during the feed production process to detect anomalies or variations that may affect product quality. This system can provide early warning and allow for quick corrective action.
3. **Periodic Quality Tests**
   Conduct periodic laboratory tests on feed samples to verify nutritional levels, hygiene and product safety. These tests help ensure that the feed produced complies with food safety standards and meets the nutritional needs of livestock.
4. **Methane Emission Monitoring**
   Using sensors or monitoring technology to continuously monitor methane emissions from livestock receiving Bettercows feed. This helps ensure that methane emission red**uction targets are achieved and validates the promised environmental impact.**
5. **Customer Feedback and Evaluation**
   Implement an effective customer feedback system to collect evaluations from farmers and stakeholders. This information is used to continuously improve products, refine services, and provide better solutions according to market needs.

2.6 Business Risk Mitigation

Identified Risks	Mitigation Plan
Farmer acceptance of new products is low	• Conduct product trials and field demonstrations • Provide product samples to try • Conduct farmer training and mentoring
Feed prices are considered expensive by farmers	• Conduct market segmentation and targeting of specific groups • Provide instalment payment options and loyalty programs • Socialise the long-term benefits of the product
Competition from conventional feed products	• Focus on product differentiation that is more environmentally friendly • Cooperate with farmer associations for joint procurement • Improve quality and after-sales service

Feed raw material supply disruption	• Diversify raw material suppliers • Long-term contracts with tied prices • Local procurement of alternative ingredients • Maintain security stock
Technical constraints of feeders in the field	• Performance testing before product launch • Field staff training and remote support • Continuous improvement of product quality • Provide spare parts and quick reaction team

MARKETING PLAN

3.1 Market Profile (Customer and Brand Persona)

Customer's Persona
Nama : Muhammad Irfan
Tempat Tinggal : Kabupaten Sumenep, Jawa Timur
Usia : 35 Tahun
Pekerjaan : Pemilik Peternakan Sapi
Penghasilan : 150.000.000 Rupiah/tahun

Pekerjaan yang harus diselesaikan **- Kinerja:** Meningkatkan efisiensi peternakan, mengurangi emisi metana, meningkatkan kesejahteraan hewan. **- Tujuan:** Meningkatkan produktivitas ternak, berkontribusi pada kelestarian lingkungan. **- Mengapa Dapat Diterima:** Bettercows menyediakan solusi holistik dengan pakan inovatif dan teknologi IoT yang terintegrasi.	**Kekuatan** **- Sejauh Mana Pasar Senang:** Irfan senang karena Bettercows membantu meningkatkan produktivitas peternakannya, mengurangi emisi metana, dan mendukung prinsip-prinsip keberlanjutan yang ia junjung tinggi.
Kasus Penggunaan **- Cara menggunakan:** Masukkan pakan Bettercows yang mengandung rumput laut dan 3-NOP, pantau kondisi sapi melalui	**Kelemahan** **- Penyebab Tidak Menyukai Produk Saat Ini:** Produk konvensional dianggap kurang efisien dan kurang berkelanjutan.

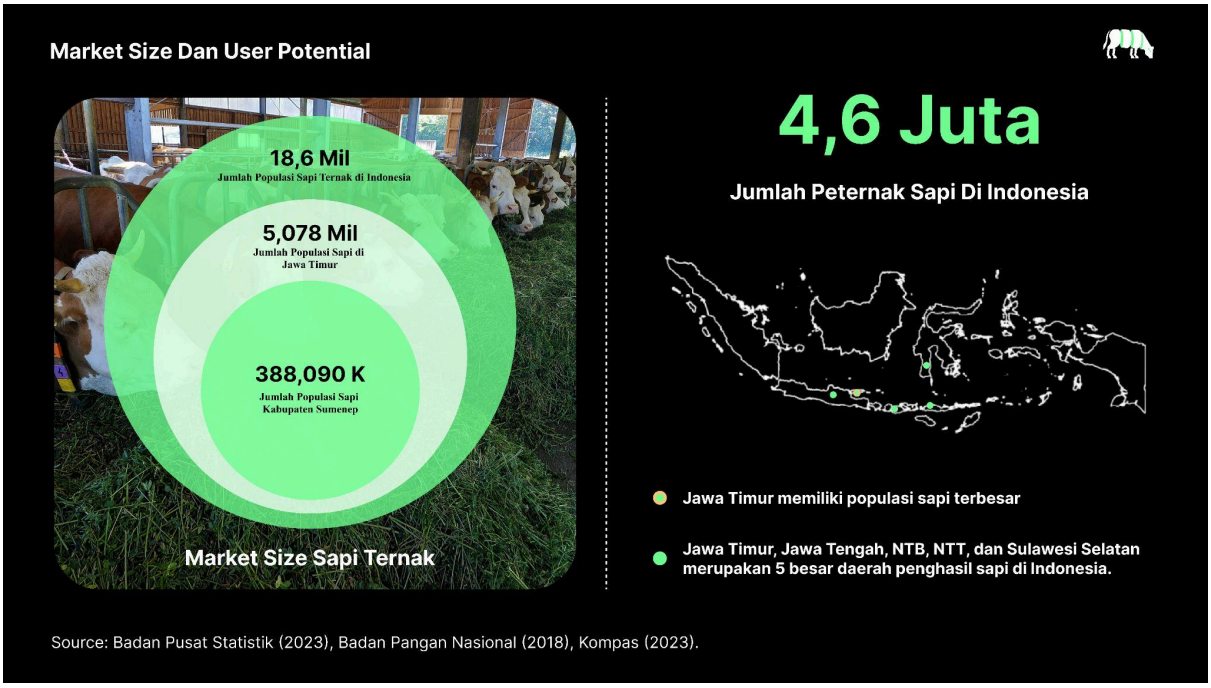

aplikasi, gunakan pengumpan otomatis. **- Sebelum dan Sesudah:** Sebelumnya, Irfan menggunakan pakan konvensional dan mengelola peternakannya secara manual. Setelah menggunakan Bettercows, efisiensi meningkat, emisi metana berkurang, dan kesejahteraan hewan terjaga. **- Informasi dan Pembelian:** Mendapatkan informasi melalui webinar pertanian dan rekomendasi dari komunitas peternak. Membeli melalui platform online atau agen distribusi lokal. **- Pengaruh Keputusan:** Dipengaruhi oleh rekomendasi komunitas peternak dan hasil uji coba Bettercows di peternak tetangga.	**- Kesulitan Pengguna:** Awalnya, Irfan mengalami kesulitan untuk mengakses informasi tentang Bettercows, namun setelah bergabung dengan komunitas, ia mendapatkan informasi yang dibutuhkan.

3.2 Market Sizing (TAM SAM SOM Analysis)

In Indonesia there are 4.6 million cattle farmers spread out, but East Java, Central Java, NTB, NTT, and South Sulawesi are the 5 regions with the most cattle farmers in Indonesia and will be the priority operational locations of Bettercows to target first. To explain the target market we want to target, we use the TAM SAM SOM matrix with the following details:

- Total Available Market (TAM): Total Cattle Population in Indonesia = 18.6 million
- Service Available Market (SAM): Total Cattle Population in East Java = 5.078 million
- Service Obtainable Market (SOM): Total Cattle Population in Sumenep District = 388,090

To determine the priority target markets that we can reach in the early years, we used a pessimistic approach on the basis that our product is a niche market that will take time in educating the public and market acquisition. We believe we can reach 5% of the SOM which is 19,404.

3.3 Segmenting Targeting Positioning (STP Analysis)

3.3.1 Segmenting

Demographics	Farmers aged 25-60 years old with medium to large scale businesses, with varying incomes. Focus on both genders, both men and women, who are active in the livestock industry.
Geography	Local and international farmers in regions where livestock sustainability is a key focus for Bettercows.
Psychographics	Farmers who are committed to sustainability and the environment. Those who adopt technology quickly, including young passionate farmers, as well as experienced farmers who seek innovation in livestock management.
Behaviors	Responsive to technology and ready to adopt automation systems, especially in feeding. Prioritize livestock welfare and understand the importance of reducing the environmental impact of livestock activities.

3.3.2 Targeting

Bettercows targets sustainability- and technology-oriented farmers who manage farms on a medium to large scale. Focus on regions with high demand for innovative solutions in livestock management, as well as in areas that have a commitment to environmentally friendly farming practices.

3.3.3 Positioning

Bettercows positions itself as an innovative solution provider that not only improves farm efficiency but also reduces environmental impact through the use of seaweed-based feed and 3-NOP. Creating an image as a partner that cares about the environment, focuses on sustainability, and supports farmers in facing global challenges in the livestock industry.

3.4 Competitor Analysis

3.5 Go-to-Market Strategy

3.5.1 Product

Bettercows offers innovative and sustainable products that are environmentally friendly. These products are designed to increase farm productivity by utilizing advanced technology. We will work with cooperatives and farmer communities to introduce these products, conduct field trials, and use agricultural extension workers as educators.

3.5.2 Price

Implement a flexible pricing strategy to make products affordable for middle to low income farmers. We will provide installment payment options and work with microfinance institutions to provide easy access to Bettercows products. In addition, we will implement special offer pricing strategies such as "Price Bundling" to provide added value to breeders.

3.5.3 Place

Form partnerships with local retailers and engage omnichannel distribution channels to ensure product availability across multiple locations. We will provide one-day delivery and cold chain facilities to ensure the products reach the farmers in optimal conditions. In addition, we will utilize cooperative networks and farmer communities as alternative distribution channels.

3.5.4 Promotion

Conduct a strong marketing campaign through digital and conventional approaches. We will educate the market through field demonstrations, training, and capacity building. Digital strategies include viral marketing, digital advertising, and special discount offers. We

will also engage influencers in the breeder community to provide testimonials and recommend Bettercows products.

3.5.5 People

Build close relationships with farmer communities through cooperatives and livestock organizations. We will engage field agricultural extension agents as education agents and establish a field mentoring team that will provide direct support to farmers. In addition, we will utilize influencer marketing by engaging farmers who have successfully adopted Bettercows products as campaigners.

3.6 Marketing Strategy

3.6.1 Awareness Stage

Bettercows will launch the #HealthyCowStrongFeed campaign to raise awareness of small-scale farmers about our innovative low-methane feed. We will create engaging content on social media, blogs and YouTube and run ads on relevant digital platforms. Collaborating with influencers and farmer communities, we would like to feature testimonials and farming tips from users of our products.

Success Matrix: Campaign reach on social media: 500k, Website visits from ads: 20k, Number of influencer content: 20 contents, Backlinks from partners: 30 backlinks, and YouTube video views: 10k

3.6.2 Consideration Stage

At the consideration stage, Bettercows will create attractive brochures and product catalogs to be presented to potential B2B buyers. We will also create testimonial content from farmers who have used our products to share on social media. Through email marketing, we will reach out to potential buyers with newsletters containing product information, promotions and farm case studies.

Success Matrix: Number of brochures and catalogs distributed: 500 copies, Reach of testimonial content on social media: 200k, Email marketing click rate: 20%, and Email lead conversion rate: 10%

3.6.3 Purchasing Stage

At the purchase stage, Bettercows provides a variety of payment methods such as bank transfers, e-wallets and installments to facilitate purchases by breeders.We also provide a money-back guarantee if the customer is not satisfied with the product.Through special promotions and discounts for new and loyal customers, we aim to increase purchase conversions.

Success Matrix:All payment methods available, Money-back guarantee request rate:<5%, Promo utilization rate by customers:40%, Sales increase from promotion:15%, and Customer retention from loyalty program:60%

3.6.4 Customer Retention

At the retention stage, Bettercows focuses on providing customer support services and post-purchase product maintenance.We have a dedicated team ready to help solve technical and operational product problems.Through a loyalty program, customers who regularly buy feed and farm equipment from us have the opportunity to get special prizes and benefits.

Success Matrix:Problem resolution rate within 1x24 hours:90, Support service satisfaction rate:85%, Number of loyalty program customers:500 people, and Repeat purchase rate from loyal customers:80%

3.6.5 Advocacy

At the advocacy stage, Bettercows focuses on building long-term relationships with customers through community engagement and testimonial reviews. We actively engage in the cattle breeder community to build relationships and get product feedback. Testimonials and positive customer reviews are obtained and published on our website and social media to inspire other farmers.

Success Matrix: Participation in 5 cattle breeder communities per year, Positive Google reviews: 100 reviews, Customer testimonials: 20 video testimonials, Positive sentiment on social media: 80%, and NPS (Customer recommendation): Score >70

HUMAN RESOURCE PLAN

4.1 Allocation and Qualification of Human Resources

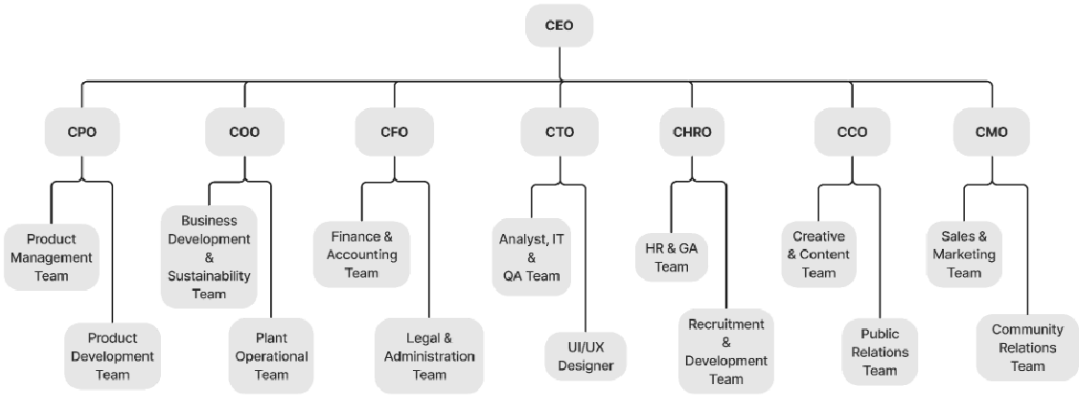

Image X. Organizational Structure Bettercows

In an effort to achieve Bettercows success, we have designed an effective human resource allocation strategy based on employee needs in each business activity, as reflected in the organizational structure we have prepared.

In addition, the human resources strategy also includes a process through careful recruitment qualifications to ensure that we recruit individuals who are not only competent and have relevant experience, but also fit our company culture and values. Then we also place great emphasis on employee training and development through structured and ongoing training programs, so that they can continue to develop and contribute optimally to Bettercows' success.

4.2 Description, Specification, and Salaries Allocation

4.2.1 Job Description

a. Chief Executive Officer (CEO)

b. Chief Product Officer (CPO)

1) **Product Management :** Identify customer needs and business goals to guide the formulation of feature plans, articulate product success targets, and realize the results of the research.
2) **Product Development :** Creating new products or improving existing products to meet consumer needs based on research results.

c. Chief Operation Officer (COO)

1) **Business Development & Sustainability :** Responsible for gaining brand recognition, increasing awareness and financial growth, as well as proposing and implementing sustainable business strategies based on the SDGs.
2) **Plan Operational :** Planning company operational standards in the development sector business and implementation of product operations, so that they are structured.

d. Chief Finance Officer (CFO)

1) **Finance & Accounting :** Make financial planning, bookkeeping, and report information through financial reports as a basis for making management decisions.

2) **Legal & Administration :** Responsible as legal and corporate governance advisor, providing appropriate advice to executives, as well as ensuring overall legal and administrative compliance by managing document templates, letterheads, filing and other administrative requirements.

e. Chief Technology Officer (CTO)

1) **Analyst, IT & Quality Assurance :** Analysis and design of efficient technological systems, monitoring and maintenance of production machine systems, computers and networks, as well as develop and implementation of inspection activities, problem detection and evaluation of results.
2) **UI/UX Designer :** Gather and evaluate user needs, illustrating design ideas using storyboards, process flows, and site maps, as well as designing graphical user interface elements.

f. Chief Human Resources Officer (CHRO)

1) **Human Resources & General Affairs :** Supervise employee performance, develop capability development programs, analyze human resources, and provide routine administrative and management services and assistance in the company.
2) **Recruitment & Development :** Responsible for all recruitment processes, from correspondence, files, CVs, to interviews, as well as continuously developing effective recruitment programs.

g. Chief Content Officer (CCO)

1) **Creative & Content Team :** Responsible for generating ideas that attract the attention of the target audience, designing and producing content for marketing purposes in collaboration with the Sales & Marketing Team.
2) **Public Relations :** Plan strategies through publicity campaigns, write and produce press releases, bridge the company and external parties, and organize promotional events.

h. Chief Marketing Officer (CMO)

1) **Sales & Marketing :** Collect, investigate, and summarize market trend data to compile reports, implementing new sales and advertising plans, and managing teams marketing and sales to meet the company's business goals.

2) **Community Relations :** Responsible for bridging and building relationships between the company and the entire community.

4.2.2 HR Qualifications

Our human resource qualifications focus on three main aspects, namely;

1. **Field Expertise**

   We are looking for individuals with educational backgrounds and relevant experience in animal husbandry, feed technology, data science, marketing and business. This includes experienced animal nutrition experts, software specialists, digital marketers and financial professionals.

2. **Technical Competence**

   The ability to use the technology is crucial. Ideal candidates are those who are capable of utilizing and developing technology and data analytics systems.

3. **Passion and Curiosity**

   We are not only looking for expertise, but also individuals who have a passion for innovation and a strong desire to bring positive change to the livestock industry. They must be adaptable, proactive and always hungry for new knowledge to ensure Bettercows' long-term success.

4.2.3 Wage System

The salary system that we implement for employees is based on a comprehensive evaluation of the responsibilities and performance of each employee. In addition, we also offer an incentive system designed to encourage high performance and achievement of business goals. With this combination, we are confident that we can build a dynamic and empowering work environment, where employees feel valued and motivated to achieve their best results.

FINANCIAL PLAN

5.1 Initial Investment

The initial costs required for the Bettercows business to run smoothly for 1 year are 1.1 billion Rupiah. These costs consist of initial investments such as application development costs, company legality and purchase of feed production machines. Then the second is for operational costs related to offices and factories, and the last is for marketing costs.

However, to develop this company, we don't need to immediately make a large initial capital deposit, because we use the *Agile Methodology Development*. So we will start developing the company from the minimum form that is sufficient to show that our company can provide innovative solutions to the problems we want to solve. This is often referred to as the *"Minimum Viable Product."*

5.2 Revenue Projection

The main income of the Bettercows business comes from the sale of concentrate animal feed and the sale of automatic feeder machines with a profit margin that we take at 20% at a price of IDR 300,000 for the feed price and IDR 3,000,000 for the automatic feeder machine price. We chose a margin of 20%, because this figure has passed our calculations and is supported by data that the animal feed industry margin is currently at 15-20%. Apart from that, because it is still in the early stages, we also want to provide incentives to cattle breeders.

Then the third income comes from commissions for selling cattle on the marketplace feature, by taking a commission of 5% from the results of each sale. And in the future we will also earn income from sales of our potential features, namely the financing feature.

To measure the size of sales, we use the basis of production quantity. By estimating sales of 1000 products in the first month for concentrate feed, and 50 products for automatic feeder machines. Where the number of sales will increase by 5% every 3 months. So from this projection calculation, we get a total gross profit of IDR 1.492,168,750 in the first year, IDR 1,813,740,442 for the second year and IDR 2,291,139,625 in the third year.

5.3 Income Projection

Through analysis of the financial reports that we have designed, the Bettercows business achieved a net profit in the first year of IDR 539,581,663, which is the result of reducing gross profit with operational costs, marketing and taxes. Net profit in the second year was IDR 681,994,669 and in the third year IDR 896,459,673.

5.4 Break Even Point (BEP)

Through Break Even Point analysis, we found that the Payback Period will occur in the 18th month or the 6th month of the second year, where the cumulative benefit cost figure is positive at IDR 128,452,102. This shows that the initial investment that has been made will produce positive net profits at that point, indicating the achievement of the stage of alignment between income and expenses.

5.5 Return on Investment (ROI)

Return on Investment from the Bettercows business reached 81.50% in the third year, above the average ROI for the feed industry in Indonesia. These results are obtained from the third year's net profit divided by the initial investment, then multiplied by 100%.

Even though the ROI of the animal feed industry in Indonesia is still relatively low, this industry still has bright prospects in the future. This is due to the continued high growth in demand for animal feed in line with the increasing consumption of livestock products in Indonesia.

PENUTUP

Kesimpulan

Dalam menghadapi tantangan global seputar ketahanan pangan dan dampak perubahan iklim, Bettercows muncul sebagai solusi inovatif yang tidak hanya mengatasi masalah tersebut tetapi juga membuka pintu menuju sebuah ekosistem pertanian yang berkelanjutan dan inklusif. Dengan fokus pada pengembangan teknologi IoT, produk pakan inovatif, dan

layanan end-to-end, Bettercows berkomitmen untuk memberikan dampak positif terhadap kehidupan peternak lokal.

Bettercows mengusung misi untuk memberikan akses kepada petani dalam ekonomi digital yang inklusif, menjembatani kesenjangan teknologi, dan memastikan keberlanjutan lingkungan. Melalui campuran pakan hibrida yang terdiri dari rumput laut dan 3-NOP, Bettercows tidak hanya menyediakan solusi praktis untuk peternak tetapi juga menjadi kontributor nyata terhadap upaya global dalam mengurangi emisi metana dari industri peternakan.

Dalam pengembangan Bettercows, kami tidak hanya berfokus pada pertumbuhan bisnis, tetapi juga pada peningkatan kesejahteraan peternak dan tanggung jawab terhadap lingkungan. Dengan mesin pemberi makan otomatis dan pemantauan real-time, kami tidak hanya membantu peternak mengelola bisnis mereka secara efisien tetapi juga meningkatkan kesejahteraan ternak.

Kami yakin bahwa melalui kemitraan dan kolaborasi dengan para peternak lokal, Bettercows dapat menciptakan perubahan positif dalam industri pertanian. Tujuan besar kami adalah menciptakan ekosistem yang mendukung pertumbuhan bisnis para peternak lokal, sekaligus memastikan keberlanjutan lingkungan. Mari bersama-sama membentuk masa depan pertanian yang lebih baik, inklusif, dan bertanggung jawab. Bettercows, untuk peternak, untuk lingkungan, untuk masa depan yang lebih baik.

Saran

Untuk memperkuat implementasi Bettercows, kami ingin turut serta aktif dalam menjalin kemitraan dengan asosiasi peternak lokal dan instansi terkait. Hal ini dapat memperluas jangkauan dan mempercepat adopsi teknologi oleh para peternak. Selain itu, peningkatan upaya pemasaran dan edukasi akan membantu meningkatkan kesadaran peternak terhadap manfaat inovasi Bettercows. Dengan terus mendengarkan umpan balik dari pengguna dan berkolaborasi dengan pemangku kepentingan, Bettercows dapat terus mengembangkan solusi yang lebih baik sesuai kebutuhan pasar dan menjaga relevansinya dalam industri pertanian.

Appendix 2. Business Process Modeling Notation

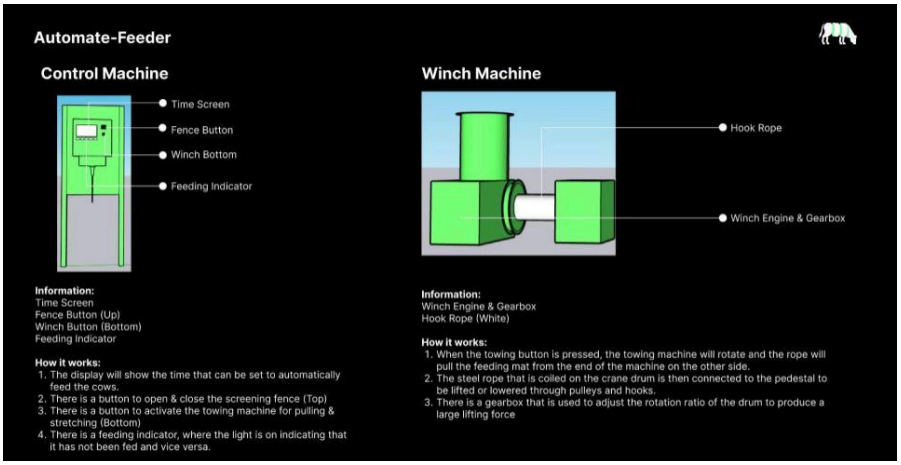

Appendix 3. Cattle Feed Production Stage

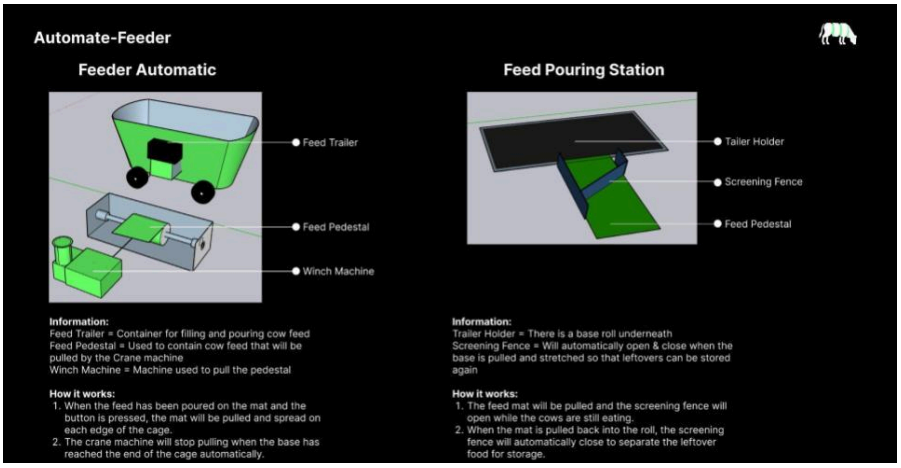

Appendix 4. Automatic Feeder Production Stage

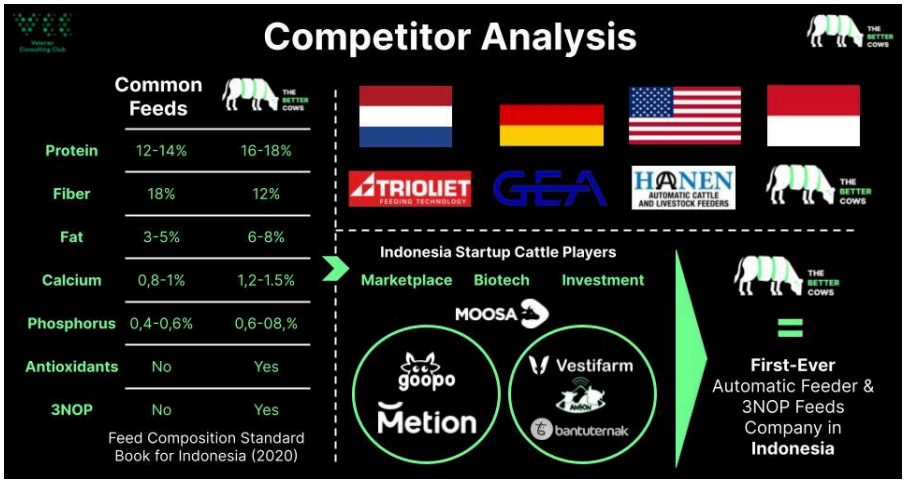

Appendix 5. Automatic Feeder Utilization

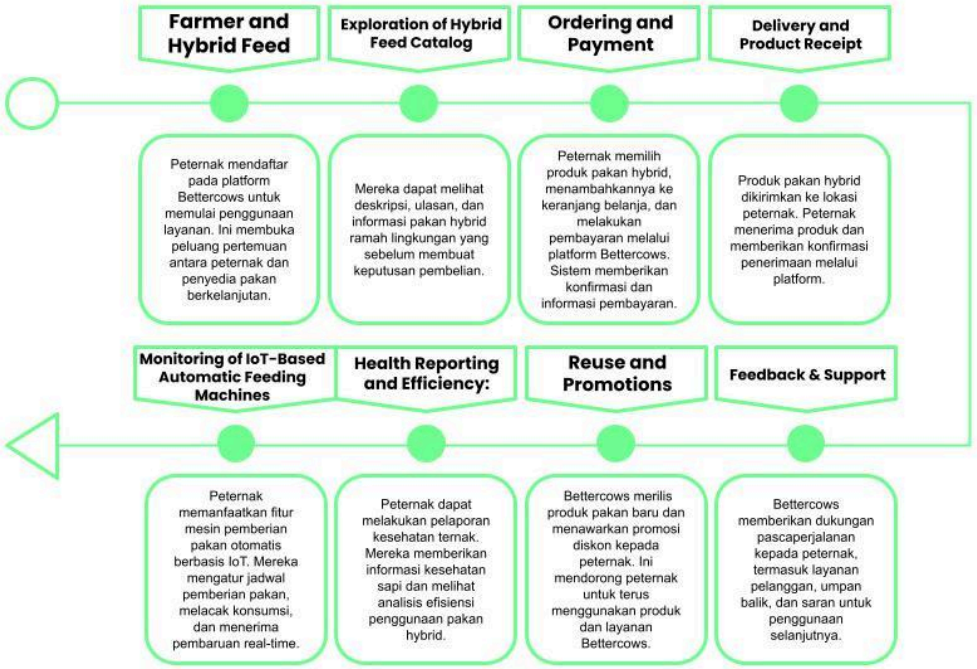

Appendix 6. Competitor Analysis

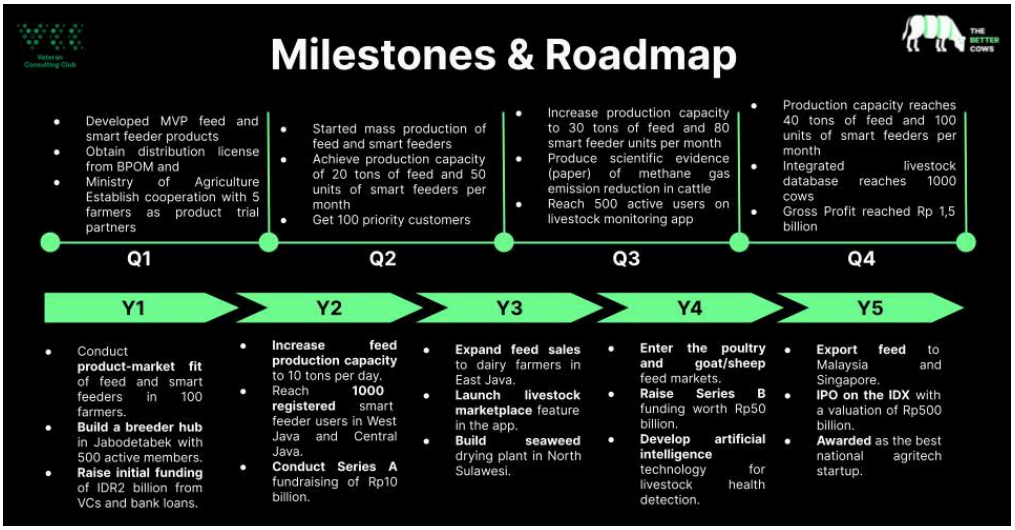

Pada bagian ini, kami ingin menyampaikan dua fakta. Pertama, pakan kami dirancang untuk memberikan dampak positif bagi kesehatan sapi dan kebersihan lingkungan. Dapat dilihat perbandingan nutrisi di tabel dengan jelas menunjukkan bahwa keunggulan pakan Bettercows lebih unggul dari pakan pada umumnya. Dengan menggabungkan 3NOP dan rumput laut, kami telah berinovasi dalam pakan yang secara signifikan meningkatkan kesehatan dan tingkat nutrisi sapi-sapi pelanggan kami.

Fakta kedua adalah bahwa perusahaan kami merupakan perusahaan pakan otomatis dan pakan 3NOP pertama di Indonesia. Sementara pemain yang ada di Indonesia seperti Goopo dan Metion hanya berfokus pada layanan pasar dan bioteknologi, serta Vestifarm dan Bantuternak hanya berfokus pada layanan investasi. Sedangkan Bettercows, layanan utama kami bersaing dengan berbagai negara maju di dunia seperti Atrioliet milik Belanda, GEA milik German, dan Hanen milik Amerika. Kami melihat hal ini sebagai bentuk validasi, bahwa pasar yang kami tuju memiliki potensi yang besar.
